

# Visual Design

*of Physical Interfaces for RFID / NFC-based Mobile Interaction*

Alina Hang

Diploma Thesis

**Supervisors:** Alexander Wiethoff und Gregor Broll

**Responsible Professor:** Prof. Dr. Heinrich Hußmann

- investigate the visual design of physical interfaces for NFC-base mobile interaction
- design of physical interfaces for their discovery
- representation of NFC-tags as visual elements
- vizualization of the functionalities of NFC-tags
- guidance cues to support the interaction workflow

- **Related Work**
- **Phases of Interaction**
- **Symbol Categorization**
- **1<sup>st</sup> User Study and Results**
- **Conclusions**
- **Further Work**

- difficulties for users during the interaction:
  - which components are interactive? [Blöckner et al, 2009]
  - how to start the interaction? [Herting et al, 2008]
  - what is the further sequence of interaction? [Geven et al, 2007]
  - how to orient the device? [Geven et al, 2007]
  - description of phone-tag interaction [O'Neill et al, 2007]: hover, slide, wave, press, ... ?
  - people would interact with the interface differently [Belt et al, 2006]: text messaging, bluetooth, infrared port, dial a number

- improving the accessibility through:  
Learnability and Guidance  
[Broll et al, 2009]

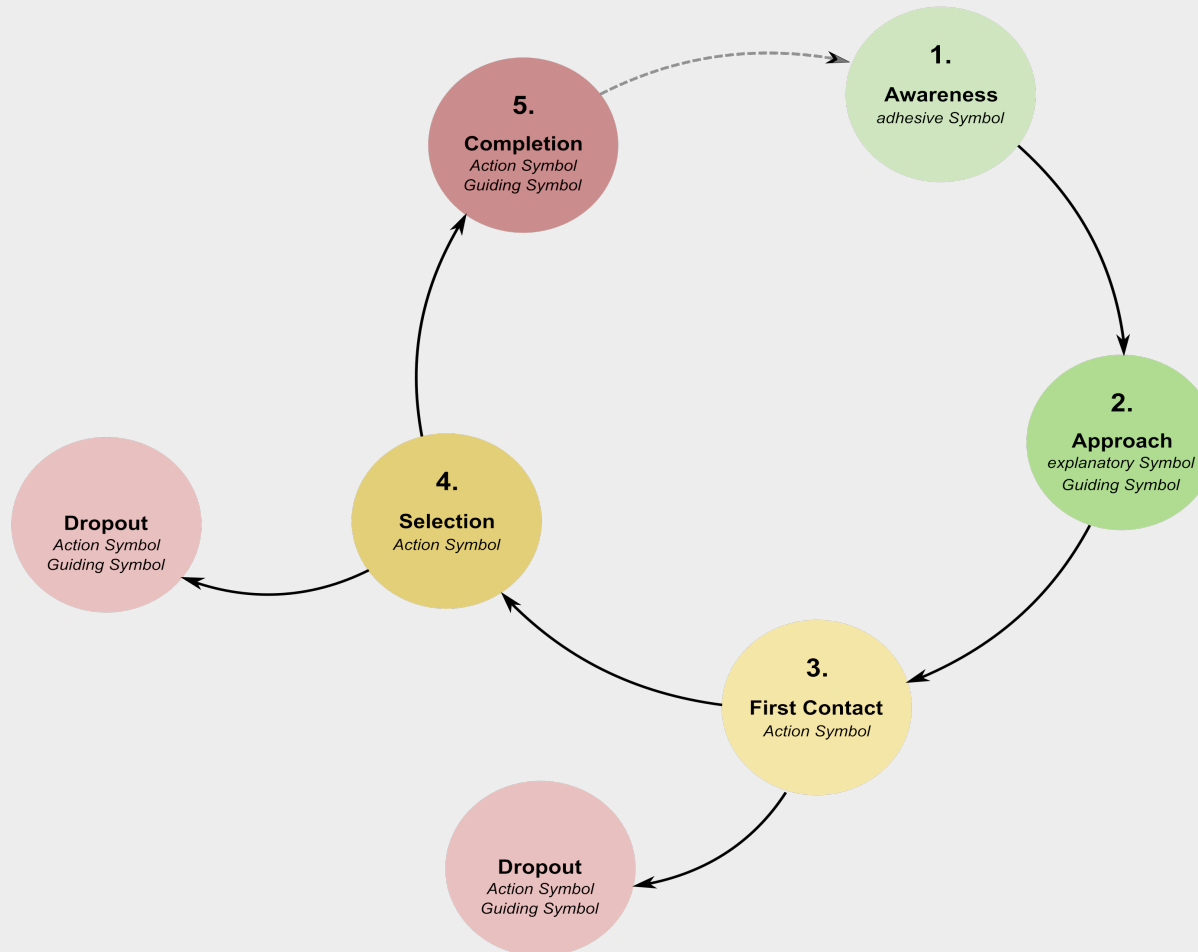

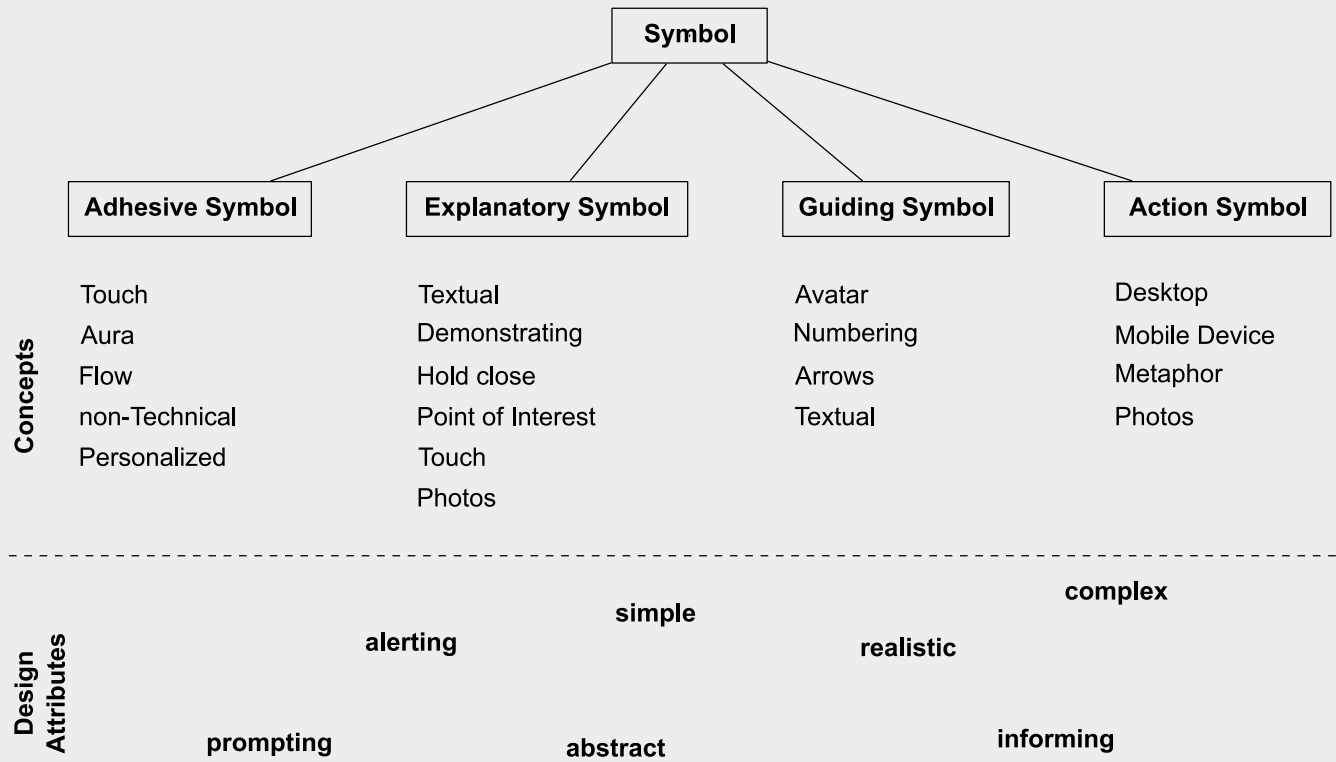

- [Riekkilä and Salminen, 2006] introduced different kinds of tags:
  - general tag
  - special tag

- [Arnall, 2006] has developed a graphic language for touch-based interactions:

- symbols which aim at gaining the attention of the user.
- symbols are based on different concepts:

**a. Flow**

**b. Touch**

**c. Personalized**

- symbols which explain the interaction to the user
  - Where?
  - With what?
  - How?

**a. Touch**

**b. Arrows**

**c. Hold close to**

- interview to gather qualitative data
- 15 subjects (aged between 24-30)
  - 8 subjects had prior experience with NFC
  - 7 subjects with no experience
- outline of user study
  - Awareness and Approach
  - Use Cases
  - Overall Designs
  - Paper Prototyping

- 19 symbols of awareness
- 15 symbols of approach
- subjects had to choose the three symbols they
  - liked the most
  - like the least
- for the three most liked symbols, subjects had to:
  - state their associations
  - make suggestions for improvements
  - state their opinion

- **Task 1:** Buy 2 tickets for exhibition
- **Task 2:** Visit a friend at his office:
- **Task 3:** Order a specific table
- **Observations**
  - do critical actions on the mobile device
  - delete and save often unclear
  - meaning of symbols not clear
  - shift of attention is confusing
  - further selection after attention shift not clear

- **Symbols of Awareness**
  - Combination of text and symbol
  - simple and not too abstract
- **Symbols of Approach**
  - no abstract symbols
  - important elements
- **Overall design / Interaction**
  - general information should be displayed on the interface
  - implicit guidance preferred
  - accentuation of critical actions

- Online Survey: 21<sup>st</sup> october 2009 – 4<sup>th</sup> november 2009  
<http://www.onlineforschung.org/visualdesign>

- draw design consequences
- refine puzzle metaphor and develop further ideas
- pick up interesting aspects and realize them in a high fidelity prototype
- test the high fidelity prototype in another user study

Questions?  
Thank You!
