User-Centered Design according to Dix et al. and Benyon (2010)

Design (according to Dix et al., 2004) =
Achieve goals under consideration of constraints

User-Centered Design according to Don Norman

Group Exercise!

- Form groups of 3-5 persons!
 - Within each group, try to fulfill the following two tasks:
- Task 1:
 - Name as many concrete experiences in private or professional life, where you have already used an approach similar to the double-diamond idea – or where you think in afterthought it would have been applicable
 - Result: List of situations in keywords, as many as possible
- Task 2:
 - Which tools and techniques do you know to support the steps of
 - envisioning
 - understanding
 - designing
 - evaluating?
 - Result: List of keywords

Conceptual Design

Questions

- What do you think was the meaning of the **colors** of the sticky notes?
- How much time should be spent on such conceptual design activities?
- How can we assess the quality of the result of conceptual design?

Concrete or Physical Design

Iterative Design

Question: Can anybody explain what the buzzword "agile" actually means?

Implementation

- During the process only prototypes have been developed
- Source code of prototypes usually is not re-usable
 - this is intentional! See chapter on prototyping...
- Final implementation brings on new challenges
 - Scalability
 - Platform diversity
 - Error tolerance
 - Commercialization
 - ...others? discussion...

Proof Sketch in Mathematics

Theorem There does not exist r in \mathbf{Q} such that $r^2 = 2$.

PROOF SKETCH: We assume $r^2 = 2$ for $r \in \mathbf{Q}$ and obtain a contradiction. Writing $r = m/n$, where m and n have no common divisors (step 1), we deduce from $(m/n)^2 = 2$ and the lemma that both m and n must be divisible by 2 (steps 2 and 3).

ASSUME: 1. $r \in \mathbf{Q}$
2. $r^2 = 2$

PROVE: False

1. Choose m, n in \mathbf{Z} such that
 1. $\gcd(m, n) = 1$
 2. $r = (m/n)$
2. 2 divides m .
3. 2 divides n .
4. Q.E.D.

Properties of Sketches

- Quick
- Timely
- Inexpensive
- Disposable
- Plentiful
- Clear vocabulary
- Distinct gesture
- Minimal detail
- Appropriate degree of refinement
- Suggest and explore rather than confirm
- Ambiguity

Resolution and Fidelity

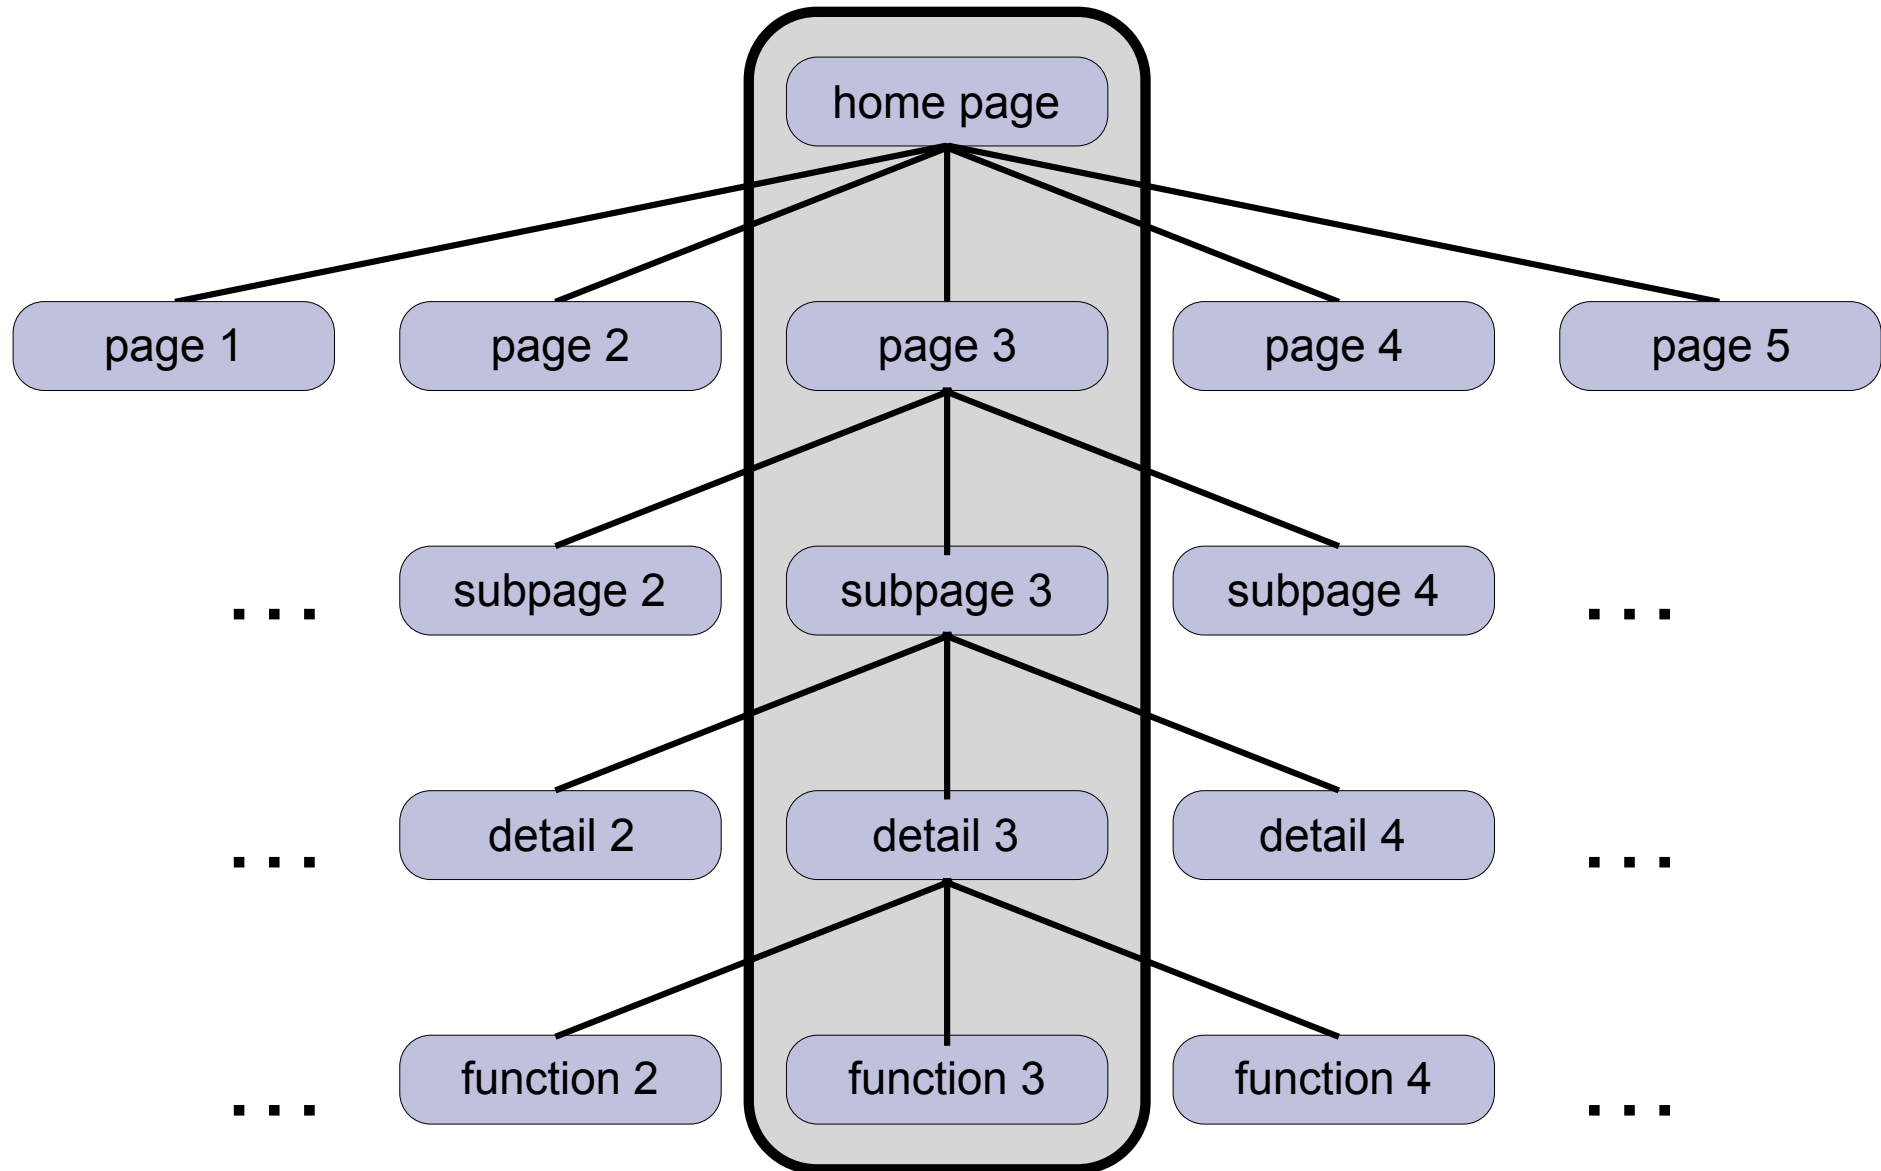

- Houde, Stephanie und Charles Hill: What Do Prototypes Prototype? In: Helander, M., T. Landauer und P. Prabhu (Eds): Handbook of Human- Computer Interaction. Elsevier Science B.V., Amsterdam, 2. Auflage, 1997.
- **Resolution** = Volume of representation of final system in prototype (e.g. only one screen vs. complete system)
- **Fidelity** = Similarity of details in prototype implementation to final system (e.g. drawing sketch vs. photorealistic rendering)

Horizontal Prototypes

Vertikal Prototypes
